GLOBAL PAYMENTS RESEARCH · OCTOBER 2026

Stablecoins for a global economy

The 2026 Report: market data, 23 market profiles, networks, regulation and outlook.

$300.9B stablecoin supply

$74.6B USDC

117 countries indexed

Data to 2 October 2026 · Evidence-graded · Not investment, legal or tax advice

CONTENTS

Fifty pages on where stablecoins actually move money

This edition updates the September 2026 research base with every material development to 2 October 2026, including the Chainalysis 2026 Global Crypto Adoption Index, the Open USD launch, the first binding GENIUS Act rule and Brazil's Resolution 561 entering force.

READ FIRST

Transaction volume is not payment volume

Stablecoin data is reported across four layers that differ by one to two orders of magnitude. This report keeps them separate on every page and labels each major figure by source type.

The four layers of stablecoin activity

LAYER	WHAT IT COUNTS	EXAMPLE FIGURES
A · On-chain transfers	Every token transfer incl. exchange wallet moves, DeFi loops, bots	$33T raw (2025); USDC $14.8T in Q2'26 [41,1]
B · Adjusted transfers	Layer A minus bots, wash trading, intra-entity transfers	$10.8T (2025); $8.82T H1'26 [9]
C · Settlement	Obligations between regulated institutions settled in stablecoins	Visa $20B run rate; CPN $14.7B [12,1]
D · Economic payments	Identified end-user payments: B2B, remittance, payroll, cards	$390B 2025 [8]; ~$400B [16]

Bar widths are illustrative of scale ordering, not to scale: Layer D is roughly 1% of Layer A.

Evidence grading

Source labels

- **PRIMARY** Issuer, network, regulator, filing
- **SECONDARY** Reputable media reporting a primary figure
- **COMPANY CLAIM** Operating metric disclosed only by the company
- **INDEPENDENT** Third-party analytics: DeFiLlama, Allium, Artemis, Chainalysis
- **ESTIMATE / MODEL** Analyst estimate or this report's scenario model

Status labels

- **VERIFIED** Matches original source and period

NEW

READING THE DASHBOARD

On-chain volume ($14.8T, $33T) is mostly trading, treasury and DeFi movement; payment measures are one to two orders of magnitude smaller. Both are real; they answer different questions.

EXECUTIVE SUMMARY

Sixteen findings

The thesis under test, “USDC is becoming an important settlement layer for global payments”, is supported in specific, bounded places: card-network settlement, crypto-linked card spend, institutional mint and redeem, and agent micropayments. It is not yet true for mass consumer or emerging-market retail flows.

01 **Supply has plateaued; activity has not.** Total supply sits near $301B (1 Oct), about 7% below the 17 May peak of $322.4B, while USDC on-chain volume rose 151% YoY to $14.8T in Q2 [56,5,1].

02 **Stablecoins were the bear market's anchor.** Chainalysis finds crypto market cap fell ~50%, yet on-chain economic activity slipped only 1.6% to $9.4T; stablecoin balances held at $98–109B [65].

03 **Cross-border usage is the growth engine.** Stablecoins crossing borders rose 77.5% to $220.3B; monthly flows doubled from $11B (Jan 2025) to $24B (Jun 2026) [65].

04 **“Payments” are still ~1% of volume.** McKinsey/Artemis estimate $390B of real payments in 2025, 58% of it B2B ($226B) [8].

05 **APAC leads payments, but it is a USDT market.** 51.2% of identified payment volume; USDT holds 91% of it, down from 98% in Jan 2025 [7].

06 **USDC won Q3 on net growth.** Circle added $915M of supply in Q3 2026, more than any issuer; Tether contracted by $207.7M [56].

07 **Card networks settle in stablecoins in production.** Visa's run rate went $3.5B → $7B → $20B (Nov 2025 → Sep 2026); Mastercard settles in six stablecoins [10,11,12,14].

08 **USDC leads where compliance meets card rails.** USDC funds 58% of on-chain-observed crypto-card spend (USDT 26%) [32].

09 **Incumbents now issue, not just integrate.** Open USD (OUSD) launched 30 Sep with Visa, Mastercard, Stripe, Coinbase and Shopify as founders, sharing reserve income with distributors [63,64].

10 **Circle owns a chain.** Arc public mainnet went live 16 Sep 2026 with 11 institutional validators incl. BlackRock, DTCC, Visa and Mastercard [67].

11 **US rules: statute yes, market structure no.** Treasury issued the first binding GENIUS rule on 30 Sep ($10B state/federal line); the CLARITY Act failed cloture 49–50 on 15 Sep [59,68].

12 **Brazil drew a line on 1 Oct.** Resolution 561 bars eFX providers from settling offshore legs in stablecoins, even as Brazil ranks #1 for adoption [62,65].

13 **India stays closed onshore.** The RBI told Parliament prohibition remains an option; 3.93 crore KYC'd users hold ~₹20,437 crore in crypto [69].

14 **Peer-to-peer went stablecoin.** Domestic P2P value rose 302.9% to $228.7B; it is now 96% stablecoins [65].

15 **Agent payments are live but tiny.** 75.4M x402 transactions worth $24.2M in a 30-day window (~$0.32 each) [36].

16 **The opportunity is in the plumbing.** Settlement, payouts, treasury and card programs, where the stablecoin is invisible to the end user, show the strongest real usage.

VERDICT ON THE CORE THESIS

True for institutional and network settlement; partly true for card-funded consumer spend; not yet true for mass remittances and emerging-market retail, where USDT dominates. On measured payment volume, USDC is an important but minority participant whose regulated position is strengthening.

NETWORK SETTLEMENT
True
Visa, Mastercard, CPN, bank mint/redeem

CONSUMER CARDS
Partly
58% USDC share of card spend

EM RETAIL & REMITTANCE
Not yet
USDT 91% in APAC; 88.7% in Brazil

WHAT CHANGED

Twelve developments from 15 September to 1 October 2026

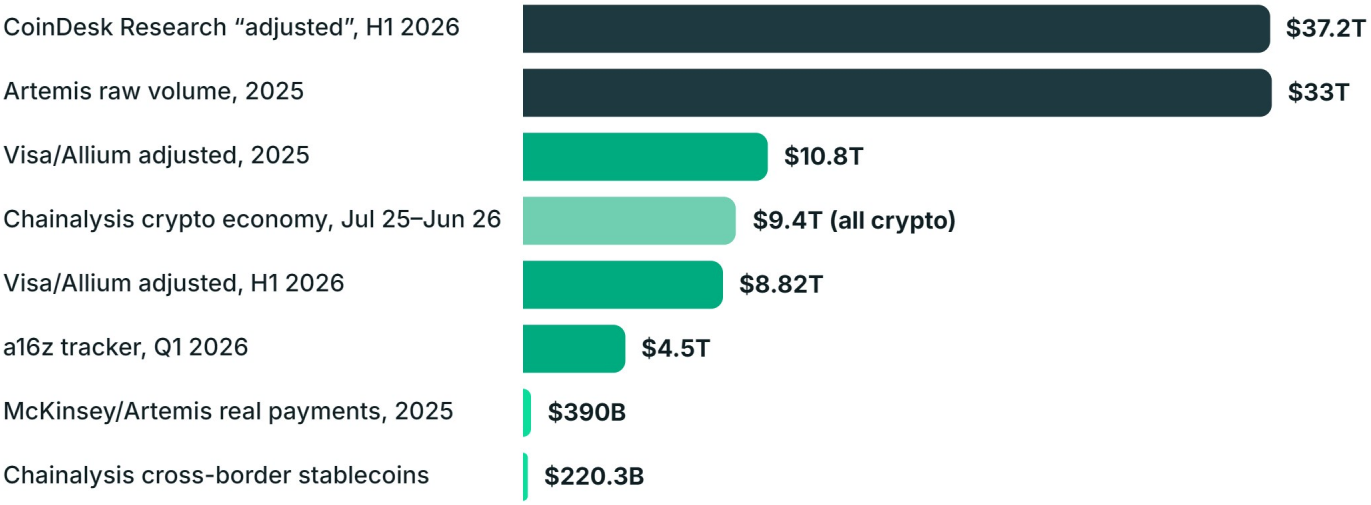
The two weeks before publication were the busiest of the year for stablecoin policy and infrastructure.

DATE (2026)	DEVELOPMENT	WHY IT MATTERS
15 Sep	CLARITY Act cloture fails 49–50 in the US Senate [68]	Market-structure law unlikely in 2026; GENIUS remains the only statute
16 Sep	Circle's Arc public mainnet live; 11 founding validators; 10B ARC genesis mint, no public launch committed [67]	USDC-native settlement chain with sub-second finality
21 Sep	USDC circulation $74.6B (+$0.3B in a week); reserves $74.8B [54]	Supply turned up after summer redemptions
22 Sep	SoFi to settle card transactions on Mastercard with SoFiUSD, >$25B annual volume expected [64]	Bank-issued stablecoin enters card settlement at scale
23 Sep	Chainalysis 2026 Adoption Index: Brazil #1, US #2, Nigeria #3, India #6 [65]	New 4-factor methodology; stablecoins drive resilience
23 Sep	Binance buys $100M of Circle stock and renews USDC distribution deal [73]	Largest exchange aligns with USDC
24 Sep	Federal Reserve proposes GENIUS prudential and application rules (R-1899, R-1900) [60]	Fed joins OCC in rulemaking; 60-day comments
29 Sep	Coinbase–Citi fiat-to-stablecoin business payments partnership [73]	Global bank on-ramp for corporate stablecoin flows
30 Sep	Open USD (OUSD) live on Base, Ethereum, Solana, Tempo [63]	Networks and processors now co-own an issuer
30 Sep	Treasury interim final rule: $10B state-pathway threshold; larger issuers move federal within 360 days [59]	First binding GENIUS rule
1 Oct	Brazil Res. 561 in force: no stablecoin settlement for eFX offshore legs [62]	First G20 rollback for regulated cross-border rails
1 Oct	Total stablecoin supply $300.9B; 308.4M holder addresses [56]	Q3: Circle +$915M, Ripple +$765M, Tether −$208M

VOLUME, SEVEN WAYS

The same market, measured from $220B to $37T

Periods and methods differ; bars are not additive. Use the measure that matches the question being asked.



WHY $37.2T IS NOT PAYMENTS

CoinDesk Research does not disclose its adjustment method; the figure exceeds 2025 raw volume ($33T), so it reads as near-raw. The Visa/Allium method, which strips bots, wash trading and intra-entity transfers, gives $8.82T for the same half-year [7,9].

WHY $390B IS THE PAYMENTS ANCHOR

McKinsey/Artemis and Stripe's 2025 annual letter (~$400B, ~60% B2B) converge independently on scale and mix. Chainalysis' $220.3B cross-border figure is a conservative lower bound counting only transfers with both ends geolocated [8,16,65].

Sources: Artemis via Forbes; CoinDesk Research (Ripple-commissioned); Visa/Allium via Spark; a16z via Forbes; McKinsey & Artemis; Chainalysis 2026 [41,7,9,40,8,65].

PART I

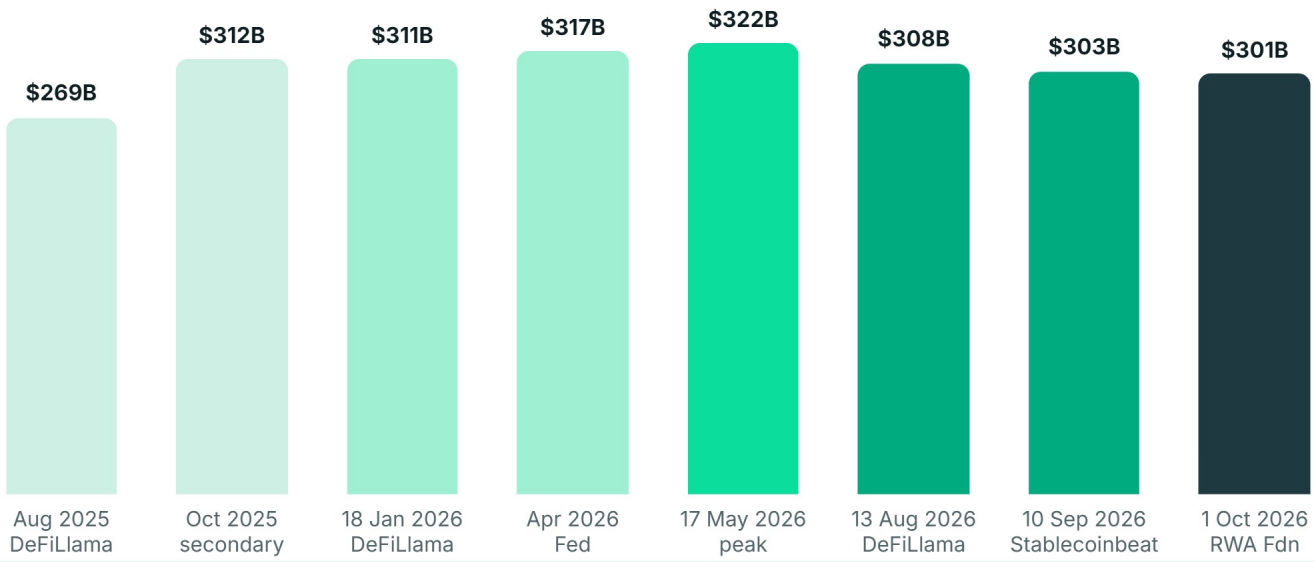
MARKET · CHAPTER 01

Total stablecoin supply held near records through a 50% crypto drawdown

Total stablecoin market capitalization

USD billions; tracker shown per point



YOY SUPPLY GROWTH
+14.3%
Aug 2025 → Aug 2026 [5]

USD-PEGGED
99.4%
Share of fiat-pegged supply, Sep 2026 [57]

OF CRYPTO MARKET CAP
~13%
Stablecoins' share of all crypto value [5]

DECOUPLED FROM THE CYCLE

Supply fell more than 30% in the last bear market. In 2026 it has held within ~7% of its peak while the crypto market halved. Chainalysis finds stablecoins rose to 22.5% of measured on-chain balances by June 2026, because everything around them lost value [5,65].

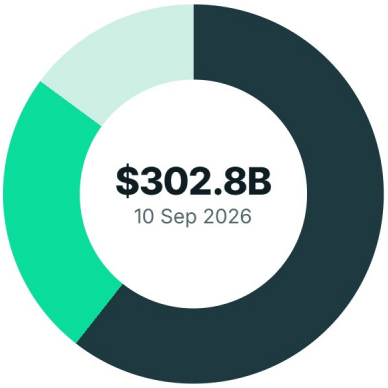
TRACKER DIFFERENCES

DeFiLlama, Stablecoinbeat and RWA Foundation count different asset sets (e.g. whether yield-bearing tokens are included; Stablecoinbeat excludes $16.2B of them). Compare points from the same tracker for trend; use ranges for level [57,56].

Sources: DeFiLlama via Reap and Decrypt; Federal Reserve FEDS Note (Apr 2026); Stablecoinbeat; RWA Foundation via U.Today [5,6,57,56].

CHAPTER 01 · CONTINUED

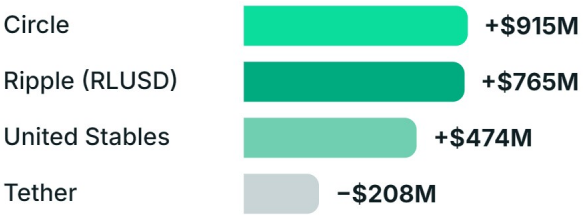
Two issuers hold ~85% of supply; Q3 growth went to the regulated challengers



- **USDT** $183.4B · 60.6%
- **USDC** $74.2B · 24.5%
- **All others** ~$45B · 14.9%

Q3 2026 supply change by issuer

1 Jul – 1 Oct



Selected dollar stablecoins

STABLECOIN	ISSUER	SUPPLY	DATE	POSITIONING
USDT	Tether	$184.6B	30 Jun 2026	Offshore liquidity; emerging-market retail; Tron-heavy [66]
USDC	Circle	$74.6B	21 Sep 2026	Regulated; OCC trust charter; card & bank rails [54,1]
USDG	Paxos / Global Dollar Network	~$3.2B	Sep 2026	Shares reserve income with distribution partners [63]
RLUSD	Ripple	$2.37B → +$765M Q3	2026	Corpay APAC funding; DBS collateral [7,56]
PYUSD	Paxos for PayPal	n/d	—	In Mastercard settlement set [14]
SoFiUSD	SoFi Bank	n/d	—	Mastercard card settlement, >$25B/yr expected [64]
OUSD	Open Standard	New	30 Sep 2026	Visa/Mastercard/Stripe/Coinbase/Shopify; $1B+ seed [63]

DISTRIBUTION IS THE NEW BATTLEGROUND

USDG and OUSD pass reserve income to the businesses that distribute them, challenging the issuer-keeps-the-float model. USDC pays partners too: about 56% of USDC reserve income is shared with Coinbase, and Circle renewed a fee deal with Binance in September [71,73,64].

Sources: Stablecoinbeat (10 Sep); RWA Foundation via U.Today; Tether attestation; Circle; CoinGecko via Blockhead [57,56,66,54,63].

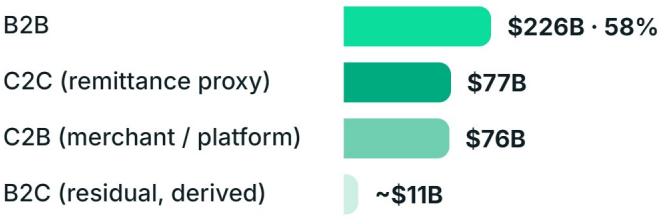
CHAPTER 01 · CONTINUED

Real-economy payments: $390B, led by business

Payments are identified end-user transfers (Layer D). They are about 1% of stablecoin transaction volume and roughly 0.02% of the >$2 quadrillion global payments market.

2025 payments by segment

McKinsey & Artemis, $B



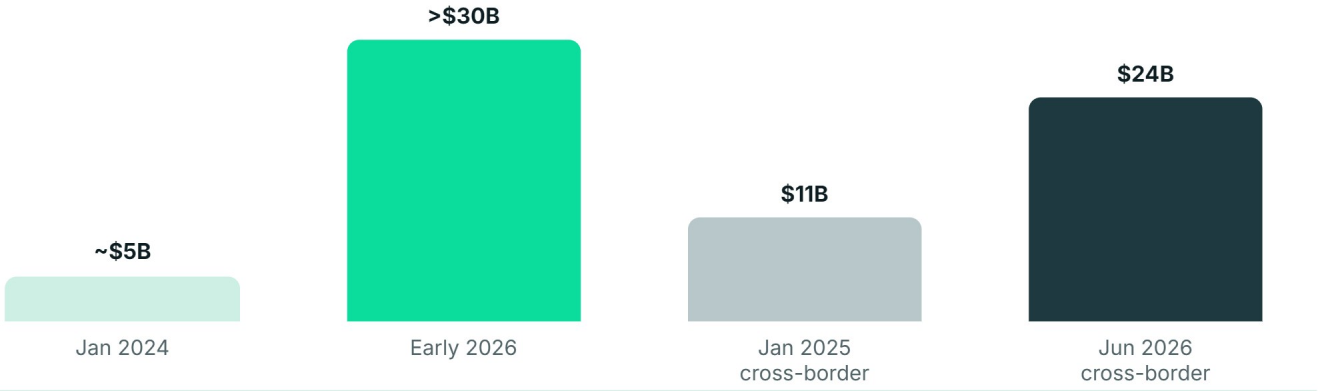
H1 2026 share of payment volume

Allium

Methods differ: Allium labels wallet-level flows; McKinsey/Artemis combine labelling and company disclosure.

Monthly stablecoin payment volume

USD billions



Left pair: all identified payments (McKinsey/Artemis via BVNK). Right pair: Chainalysis' conservative cross-border measure. Different scopes, same direction: roughly a doubling.

Stablecoins vs. >$2 quadrillion [8]

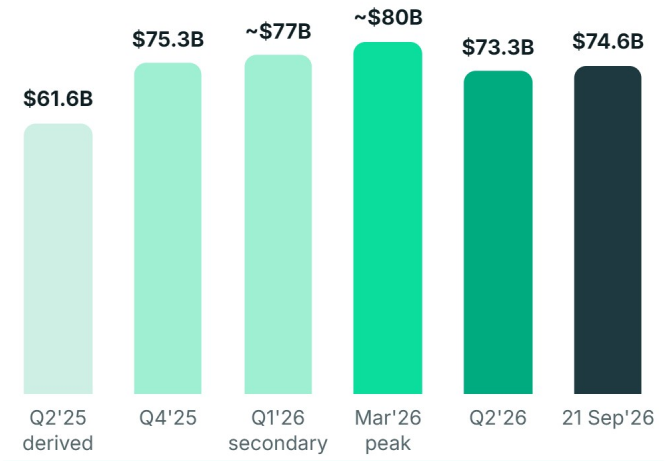
Sources: McKinsey & Artemis (Feb 2026); Allium via CoinDesk Research; Stripe 2025 letter; Chainalysis 2026; EY-Parthenon via Tazapay [8,7,16,65,53].

ISSUER · CHAPTER 02

USDC in 2026: flat float, rising velocity

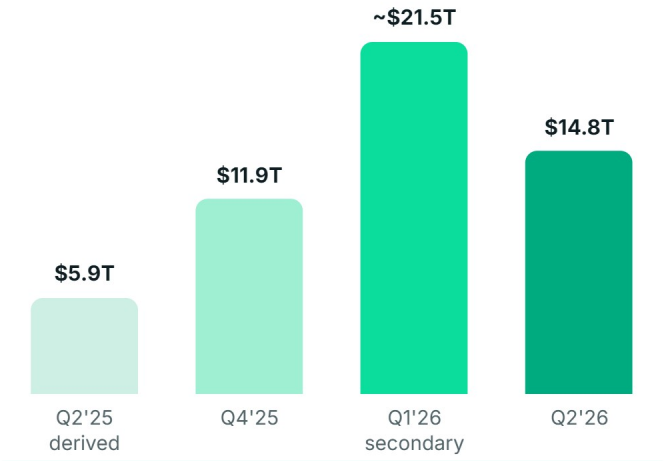
USDC in circulation

USD billions



USDC on-chain volume per quarter

USD trillions



Q2 VOLUME YOY
+151%
On-chain, Layer A [1]

NATIVE CHAINS
38
16 Sep 2026, incl. Arc [4]

WALLET REACH
500M+
End-user wallet products with USDC access [4]

MINT COUNTRIES
185+
Wires and bank transfers via Circle Mint [4]

INTERPRETATION

Redemptions exceeded mints in Q2 ($87B vs $83B), yet on-chain volume more than doubled. More work is done per dollar of float. Circle's 40% through-cycle circulation CAGR target has not been met over the last four quarters [1].

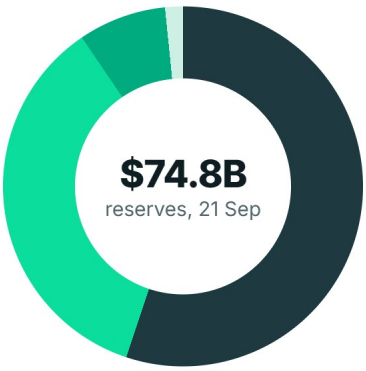
SEPTEMBER TURN

In the week to 21 Sep, Circle minted ~$10.1B and redeemed ~$9.8B, lifting supply to $74.6B. Q3 net supply growth of $915M was the largest of any issuer [54,56].

Sources: Circle Q2'26 results; Circle Q4'25 via PYMNTS; Q1'26 via web3wagmi (secondary); Circle USDC page; PANews [1,71,72,4,54]. Q2'25 derived from reported YoY growth.

CHAPTER 02 · CONTINUED

What backs a USDC, and how Circle's business is running



- **$41.2B** overnight Treasury reverse repo
- **$26.5B** Treasuries < 3 months
- **$5.9B** deposits at systemically important banks
- **$1.2B** other bank deposits

Circle operating metrics, Q2 2026

METRIC	VALUE	YOY	LABEL
USDC in circulation, period end / average	$73.3B / $76.5B	+19% / +25%	PRIMARY
USDC minted / redeemed in quarter	$83B / $87B	+97% / +113%	PRIMARY
USDC on Circle platform, period end	$12.4B	+106%	PRIMARY
Meaningful wallets (>$10 USDC)	7.0M	+24%	PRIMARY
Circle Payments Network, annualized (T30D)	$14.7B	+76% QoQ	COMPANY CLAIM
CPN enrolled financial institutions	175	+29% QoQ	COMPANY CLAIM
Reserve return rate	3.5%	−66 bps	PRIMARY

CONCENTRATION RISK

Coinbase held an average $19B of USDC in Q1 2026, more than a quarter of supply. Tokenized money-market funds that pay yield are flagged by Circle as competition for USDC balances [35,1].

Sources: PANews / TokenPost weekly Circle data (25 Sep 2026); Circle Q2 2026 results [54,1,35].

CHAPTER 02 · CONTINUED

Circle's economics: rate-sensitive income, expanding distribution

REVENUE & RESERVE INCOME
$701M
Q2 2026, +7% YoY [1]

RESERVE INCOME
$668M
+5% YoY [1]

ADJUSTED EBITDA
$143M
+8% YoY [1]

RESERVE INCOME TO COINBASE
~56%
Revenue-share agreement [71]

2026 institutional distribution (Circle-reported and press)

PARTNER	DEVELOPMENT	STATUS
BNY	Primary reserve custodian; USDC mint/redeem in Digital Asset Custody	LIVE
Standard Chartered	Bank-led USDC mint/redeem for institutions; Arc validator	LIVE
Binance	$100M Circle share purchase; USDC distribution deal renewed (23 Sep)	NEW
Nium	USDC settlement via CPN into 190+ payout countries	LIVE
JCB (Japan)	Cross-border treasury in USDC; in-store payments for visitors	PROPOSED
Kakao (Korea)	Exploratory collaboration	PROPOSED
Grupo Bind (Argentina)	USDC/ARS institutional liquidity	LIVE
Marex	First USDC initial margin for CFTC-regulated derivatives	LIVE
Intuit	Multi-year partnership to embed USDC (announced with Q4'25)	PROPOSED
OCC	Final approval for Circle national trust bank	LIVE

RATE EXPOSURE
A 66 bp fall in the reserve return rate offset most of the 25% growth in average USDC. Lower US rates compress issuer income unless circulation grows faster [1].

AGENT STACK & ARC
Circle launched Agent Stack (900+ paid services) in May and Arc mainnet in September, adding product and network revenue lines beyond float income [1,67].

Sources: Circle Q2'26 results and earnings call; PYMNTS; Blockhead [1,2,71,73].

CHAPTER 02 · TETHER

Tether Q2 2026: record operating profit, halved buffer

USDT SUPPLY
$184.6B
30 Jun, +$446M in Q2 [66]

NET OPERATING PROFIT
$1.5B
Q2; up from ~$1.04B in Q1 [66]

EXCESS RESERVES
$4.11B
Down from $8.23B in Q1 [66]

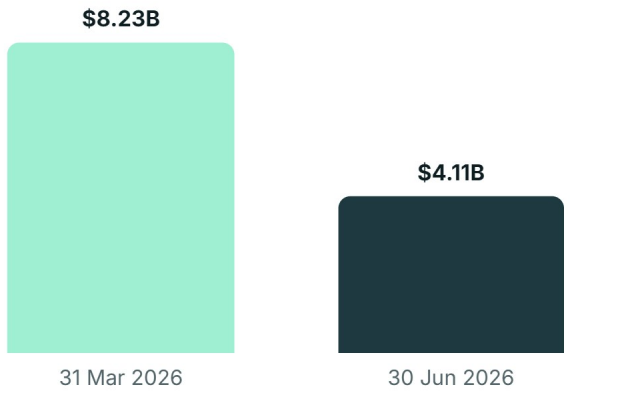
RECORD USDT SUPPLY
$189.8B
May 2026 [66]

Balance sheet, 30 June 2026

ITEM	VALUE
Total assets	$187.75B
Total liabilities	$183.64B
Gold	~146.2 t · $18.84B
Bitcoin	98,932 BTC · ~$5.8B
Secured loans	$2.38B (−$2.4B)
Attestor	BDO; KPMG audit engaged Mar 2026, not completed

Excess reserve buffer

USD billions



WHY PROFIT ROSE WHILE THE CUSHION FELL

Operating profit excludes mark-to-market moves. Declines in gold and bitcoin holdings, plus capital deployment, more than absorbed the quarter's $1.5B; one analysis puts the first-half comprehensive result near −$3.17B [66].

MARKET POSITION

USDT held >60% of supply through 2026 and ~91% of identified APAC payment volume; most new cross-border corridors tracked by Chainalysis ran on USDT [66,7,65].

US EXPOSURE

Tether describes itself as one of the largest holders of US Treasuries, ranking USDT as the 19th-largest holder if it were a country [66].

Sources: Tether Q2 2026 attestation via Cointelegraph, crypto.news, Stablecoin Insider, Bitcoin.com, FRNT [66]. Figures are company-reported, attested not audited.

COMPARISON

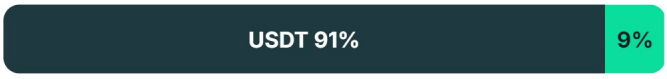
USDC vs USDT: different strengths, different markets

No overall ranking is implied. USDT leads supply and emerging-market retail; USDC leads filtered volume, card spend and regulated institutional channels.

DIMENSION	USDC	USDT
Circulation	$74.6B (21 Sep 2026) [54]	$184.6B (30 Jun 2026) [66]
Supply share	~24.5% [57]	~60.6% [57]
Q3 2026 net change	+$915M [56]	−$207.7M [56]
Transaction volume, 2025	$18.3T [5]	$13.3T [5]
Adjusted volume share, Jun 2026	~67% [9]	~32% [9]
APAC payment share, Jul 2026	Within 9% “others” [7]	91% [7]
Crypto-card spend share, Jul 2026	58% [32]	26% [32]
Brazil declared volume, 2019–25	7.1% [27]	88.7% [27]
Main chains	Ethereum, Solana, Base; 38 native [4]	Tron ($87.9B), Ethereum ($78.7B) [58]
Reserve reporting	Weekly data; monthly third-party assurance [4]	Quarterly BDO attestation [66]
Regulatory positioning	MiCA-compliant; OCC trust charter; bank mint/redeem [1]	Dominant offshore liquidity; exchange-led
Network settlement	Visa, Mastercard [10,14]	Not in Mastercard's June 2026 set [14]

Card spend share

APAC payment share



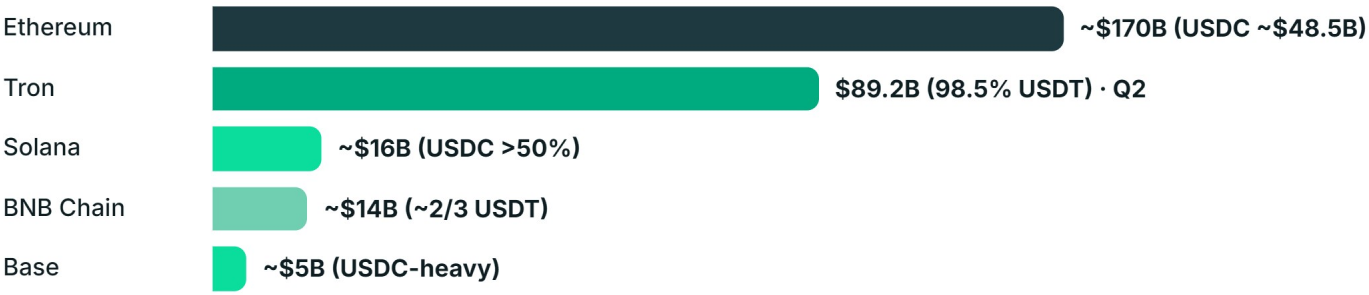
Sources: As cited per row.

CHAINS

Where stablecoins live vs. where payments happen

Stablecoin supply by chain

approx., USD billions, 2026



CHAIN	PAYMENT RELEVANCE (DOCUMENTED)
Tron	Record $2.1T USDT transfers in Q2 2026; network fees $699.4M; emerging-market P2P and remittance [58]
Ethereum	Settlement and institutional activity; $78.7B USDT at Q2 end [58,51]
Solana	Visa US USDC settlement; 19% of crypto-card spend [10,32]
Base	x402 agent payments; 19% of card spend [35,32]
Optimism	29% of crypto-card spend [32]
Polygon	>$2B app payments in Jan 2026 (Revolut, Tazapay, Avenia) [41]
Arc (Circle)	Mainnet 16 Sep 2026; USDC gas; finality <1s; benchmark >3,000 TPS [67]
Tempo (Stripe/Paradigm)	Mainnet Mar 2026; OUSD native at launch [17,63]

ISSUANCE SHARE ≠ PAYMENT SHARE

Ethereum holds the most supply, but card spend concentrates on Optimism, Solana and Base, and grassroots remittances on Tron. New payment-purpose L1s (Arc, Tempo) run permissioned institutional validator sets.

Sources: DeFiLlama via Bitcoin Foundation News (Apr 2026); Messari State of TRON Q2 2026; a16z; Arc [51,58,32,67].

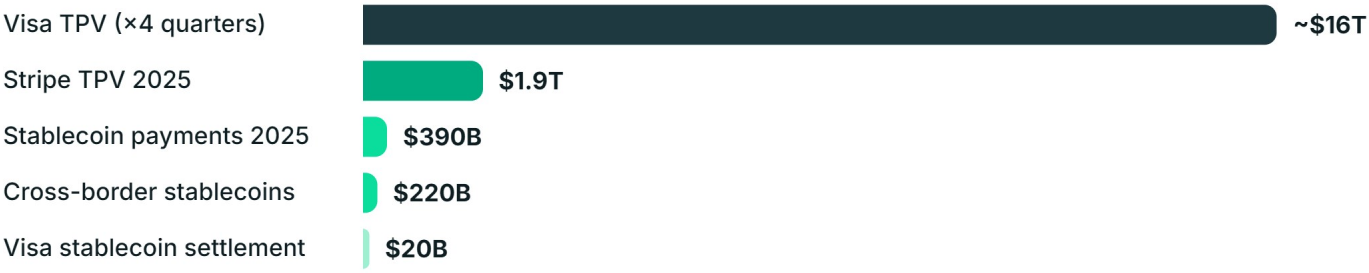
CONTEXT · CHAPTER 03

A rounding error against incumbent rails, which is why incumbents integrate

BENCHMARK	FIGURE	SOURCE
Global payments volume	>$2 quadrillion / yr	McKinsey [8]
Visa total payment volume, FQ3 2026 (one quarter)	>$4T	Visa [13]
Visa processed transactions, quarter	71.7B	24/7 Wall St [74]
Stripe total payment volume, 2025	$1.9T (+34%)	Stripe [16]
Brazil Pix transactions, 2025	80B (+25%)	BCB [30]
Chainalysis on-chain crypto economy, Jul 25–Jun 26	$9.4T	Chainalysis [65]
Stablecoin real-economy payments, 2025	$390B	McKinsey & Artemis [8]
Cross-border stablecoin flows, Jul 25–Jun 26	$220.3B	Chainalysis [65]
Visa stablecoin settlement run rate, Sep 2026	$20B	Visa [12]

Annualized scale, log-like view

USD



STRATEGIC LOGIC FOR NETWORKS

Visa's CEO frames stablecoins as optionality against roughly $4T of quarterly volume, and Visa books no separate stablecoin revenue line. The attraction is 24/7 treasury efficiency and defending distribution, not near-term revenue [13,74].

GEOGRAPHY · CHAPTER 04

Chainalysis 2026: Brazil, the US and Nigeria lead grassroots adoption

A new four-factor method (service flows, domestic P2P, cross-border flows and on-chain balances, each PPP-weighted, combined by geometric mean) ranks 117 countries for July 2025 – June 2026.

#	COUNTRY	FLOWS	BALANCES	P2P	X-BORDER
1	Brazil	3	4	3	2
2	United States	1	1	20	11
3	Nigeria	18	18	1	1
4	Japan	4	7	10	4
5	South Korea	5	2	12	12

Top-4 on every factor, #1 on none

NIGERIA P2P · X-BORDER

#1 · #1

Strongest grassroots flow profile

INDIA

#2 flows

Second-largest service flows; #6 overall

HOW TO USE THIS TABLE

Sub-ranks show what drives each market: the US and India are service-flow and balance markets; Nigeria, South Africa and China are P2P and cross-border markets; Brazil is balanced across all four. The index measures crypto use broadly, not USDC specifically.

Sources: Chainalysis, 2026 Global Crypto Adoption Index, 23 Sep 2026 [65].

OCC final rule targeted [20]	Expected	Nov 2026
GENIUS Act effective (latest date) [19]	Scheduled	18 Jan 2027

Production payments

Visa USDC settlement with Cross River and Lead Bank (Dec 2025); Mastercard six-stablecoin settlement (Jun 2026); Stripe USDC acceptance; Marex USDC margin; Coinbase–Citi business payments (29 Sep 2026) [10,14,1,73].

What it means

Issuers above $10B (USDC, USDT's US arm, OUSD at scale) face a federal regime. Domestic consumer payment use stays limited given mature card, ACH, RTP and FedNow rails; the US story is distribution and settlement.

Sources: OCC, Treasury, Federal Reserve, Sullivan & Cromwell, CNBC, Yahoo Finance [18,19,20,59,60,61,68].

DEEP DIVE · MARKET FOCUS · INDIA I

India: world-class rails, a closed onshore door

India combines UPI, large export-services receivables and heavy retail crypto use with the most restrictive stance among major economies. The practical USDC↔INR model in 2026 keeps the stablecoin leg offshore.

CHAINALYSIS 2026
#6
#2 service flows; #3 balances [65]

~$2.3B; 54 FIU-registered VASPs [69]

USDT PREMIUM
7–10%
Indian exchanges, Jun 2026 [26]

Regulatory position (not legal advice)

AREA	STATUS, OCTOBER 2026
RBI stance	Policy "leaning towards prohibition"; wants banks insulated from crypto and private stablecoins; prohibition kept as a recognised option before the parliamentary panel [23,69]
Financial Stability Report	30 Jun 2026: foreign-currency stablecoins could undermine monetary sovereignty and policy transmission [69]
Policy paper	Crypto discussion paper shelved again (Apr 2026); no stablecoin framework imminent [25]
Tax	30% tax on VDA gains, 1% TDS; VDA definition widened 1 Apr 2026; reporting penalties ₹200/day late, ₹50,000 incorrect [25]
AML	VDA providers under PMLA with FIU-IND registration (54 registered) [23,69]
FEMA / exports	A stablecoin received directly is a VDA, not documented export proceeds [24]
Payment aggregators	RBI PA-Cross Border authorization governs licensed collection (e.g. Xflow) [24]
Government view	Economic Survey 2025–26 signalled interest in a stablecoin framework, diverging from RBI caution [76]

BOTTOM LINE

No Indian bank, NPCI or RBI-licensed entity was found offering direct USDC settlement as of 2 October 2026. Demand is real; regulated access runs through offshore legs settling in INR.

MARKET FOCUS · INDIA II

Where India's stablecoin demand shows up

Use cases: onshore vs offshore-leg model

USE CASE	ONSHORE USDC TODAY	OFFSHORE-LEG MODEL	KEY DEPENDENCY
Exporters / SaaS receivables	Tax & FEMA friction	Live (pilots)	PA-CB partner, e-FIRA
Freelancer income	VDA tax on conversion	Emerging	Purpose codes, KYC
Inbound remittances	Not a payment instrument	Limited	RBI policy change
Merchant / UPI acceptance	Not permitted	No	Regulatory framework
Outbound travel spend (cards)	Restricted	Via foreign issuers	LRS, issuer policy

Documented market signals

Offshore-leg pilot

Xflow announced a stablecoin payments pilot on 14 May 2026: the stablecoin leg stays outside India and INR settles to the exporter's bank account with an e-FIRA [24].

Dollar demand

After an Enforcement Directorate action in June 2026, USDT traded at a 7–10% premium on Indian exchanges [26].

Retail usage

~39M crypto investors holding ~$2.1B (May 2026); stablecoins were 38.5% of WazirX H1 2026 volume [52].

Cost friction

India was the exception to low APAC stablecoin delivery costs (median 6.1 bps region-wide), due to tax and rail factors [7].

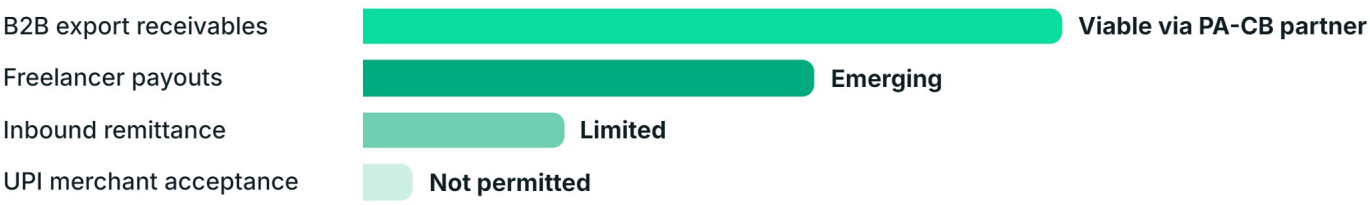
Resilience

TRM: India was the most resilient major market in Q1 2026, down 6% YoY vs a 20% global average, sustained by P2P [75].

Measurement caveat

Chainalysis' wealth adjustment shrinks India's allocated exchange value: identical 8.1% traffic shares became 3.2% (India) vs 11.6% (Korea) [65].

India readiness by FurlPay module (framework)



Qualitative readiness scores by FurlPay Research based on the regulatory evidence above; not a forecast.

COUNTRY · MARKET FOCUS

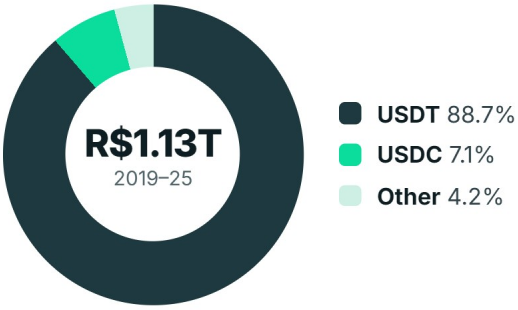
RES. 561 IN FORCE
1 Oct 2026
eFX settlement ban [62]



2026 regulatory timeline

DATE	EVENT
2 Feb	Res. 519–521 in force; VASP authorisation regime
30 Apr	Res. 561 published
May	FX reporting for stablecoin operations
1 Oct	Res. 561 effective
30 Oct	eFX Unicad registration update; VASP transition ends

WHAT RESOLUTION 561 DOES

From 1 October 2026, the settlement leg between a regulated eFX provider and its overseas counterparty must run through a licensed FX transaction or a non-resident real account. Stablecoins and other virtual assets are barred for that leg. It is not a crypto ban: individual international transfers via authorised VASPs remain permitted, and eFX is restricted to BCB-authorised institutions [62,28].

Who is affected

Fintechs and eFX firms that settled offshore balances in USDT/USDC. One estimate puts ~90% of Brazil's $6–8B monthly international crypto flow through stablecoins (secondary) [62].

Expected effects

Higher costs (IOF, correspondent fees) for eFX flows; a two-tier system where licensed banks and VASPs keep stablecoin access; risk that volume shifts to P2P channels with less visibility.

Sources: Chainalysis; Receita Federal via InvestNews; BCB via Mobile Time; CoinDesk; Crumpton Global; CryptoSlate [65,27,30,62,28].

REGION · CHAPTER 06

Latin America: the most retail-driven stablecoin region

Chainalysis finds Latin America's crypto economy grew 9.8% period-over-period, bucking the global trend, on a collective pivot to stablecoins as a hedge against currency volatility.

Mexico #11

MARKET	US–Mexico among the largest remittance corridors (background); #5 in cross-border flows [65]
PAYMENTS	ARQ (ex-DolarApp) early Mastercard stablecoin-settlement participant [14]
RAILS	SPEI, CoDi/DiMo
RULES	Fintech Law restricts FIs' crypto activity; peso-stablecoin sandbox in process (background)

Argentina

MARKET	Dollarization demand; savings and P2P use
PAYMENTS	Grupo Bind–Circle USDC/ARS institutional liquidity [1]; card spend
RAILS	Transferencias 3.0, QR interoperability
RULES	CNV VASP (PSAV) registry (background)

Venezuela TRM #17

MARKET	$17.9B; adoption driven by stablecoins rather than speculation [75]
PAYMENTS	Retail savings and transfers under economic stress
RAILS	Constrained domestic banking
RULES	Sanctions exposure; limited formal framework

Regional evidence

SIGNAL	EVIDENCE
Card spend	Rain: LATAM one of the clearest stablecoin-card markets; retail card spend +105–106% YoY [34]
Network settlement	Mastercard stablecoin settlement launched US & LATAM first (Jun 2026) [14]
Visa	Global stablecoin settlement program spans LAC, Europe, AP, CEMEA [12]
Brazil growth	Brazil stablecoin activity +495% vs LATAM average +89.4% (secondary) [62]
Colombia, Chile	In scope; no 2026 primary data specific to USDC payments located

IMPLICATION

LATAM pairs strong demand with tightening perimeters. Providers need licensed local entities (VASP, eFX, PSAV) and should model Brazil-style restrictions spreading to other regulated cross-border rails.

Sources: Chainalysis LATAM chapter; TRM Q1 2026; Rain via CoinDesk; Mastercard [65,75,34,14].

REGION · CHAPTER 07

APAC: the largest payment region, built on corridors

Fragmented currencies, heavy trade corridors, real-time domestic rails and active regulators make stablecoins a cross-border bridge rather than a domestic payment method.

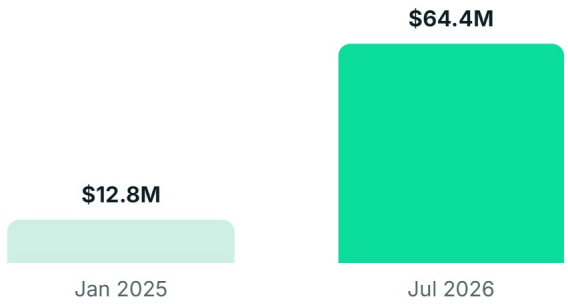
INDICATOR	VALUE	PERIOD	SOURCE
Share of identified global stablecoin payment volume	51.2%	2025–26	CoinDesk / Allium [7]
APAC-linked payment corridors identified	426 corridors · 28 countries	n/d	CoinDesk [7]
Stablecoin payment volume in those corridors	$30.9B · 14.2M txns	n/d	CoinDesk [7]
USDT share of APAC payment volume	98% → 91%	Jan 2025 → Jul 2026	CoinDesk [7]
Non-USD stablecoin market cap (JPY, AUD, SGD, PHP, CNY)	$12.8M → $64.4M	Jan 2025 → Jul 2026	CoinDesk [7]
Median delivery spread, APAC network	6.1 bps	Q2 2026	Borderless.xyz [7]
On-chain stablecoin activity in APAC	$2.4T	Jun 2024–Jun 2025	Circle (claim)

Largest identified bilateral flows

- Taiwan → Indonesia
- Taiwan → South Korea
- Taiwan → Australia
- Singapore ↔ China (cited by Circle, 2025)

Non-USD stablecoins, APAC

USD millions



WHY APAC MATTERS FOR USDC

APAC is where regulators are building recognition pathways for foreign stablecoins (Japan, Australia, Singapore consultation), and where compliance-first coins gain share from a low base. Documented Circle relationships: JCB, Kakao (exploratory), SBI (Arc validator), Standard Chartered [1]. a16z attributed nearly two-thirds of Q1 2026 volume to Asia, mainly Singapore, Hong Kong and Japan [40].

Sources: CoinDesk Research APAC series (15 Sep 2026; Ripple-commissioned) [7].

APAC PROFILES

Singapore, Hong Kong and Japan: three regulated hubs

Singapore

Hub

MARKET	Named by Circle as a top global stablecoin hub; regional issuers include StraitsX (XSGD, XUSD) [7]
PAYMENTS	Treasury, cross-border B2B, merchant acceptance via licensed firms (Nium, dtcpay, TripleA)
RAILS	PayNow, FAST; MAS Project BLOOM for multi-currency settlement
RULES	MAS Single-Currency Stablecoin Framework; 2026 consultation on legislation incl. limited foreign-stablecoin recognition [7]

Hong Kong

Licensing

MARKET	Active licensing phase; tokenized deposits and Project Ensemble in parallel [7]
PAYMENTS	Institutional settlement, tokenized assets, cross-border treasury
RAILS	FPS, CHATS
RULES	Stablecoins Ordinance effective Aug 2025; HKMA's first licences to Anchorpoint Financial and HSBC in Apr 2026; no equivalence pathway for foreign issuers [7]

Japan

#4

MARKET	Chainalysis #4 overall, #4 cross-border [65]; KRW and JPY >90% of APAC fiat CEX spot volume H1 2026 [7]
PAYMENTS	JCB–Circle: cross-border treasury in USDC and in-store stablecoin payments for visitors (announced) [1]
RAILS	Zengin, cards, QR
RULES	Issuance limited to banks, trust companies and fund-transfer providers; foreign trust-type stablecoins via registered intermediaries; SBI VC Trade distributes USDC [7,38]

THE RECOGNITION QUESTION

Cross-border usability of USD stablecoins increasingly depends on equivalence: Japan's foreign trust-type pathway and Singapore's consultation versus Hong Kong's licensing without equivalence [7].

APAC PROFILES

South Korea, China and Australia

South Korea

#5

MARKET	Chainalysis #5; #2 in balances [65]. Hana Bank took 6.55% of Dunamu (~$733M); Mirae Asset 97.15% of Korbit (~$103M) [70]
POLICY	19 Jul 2026 roadmap (MOEF, FSC, BOK, FSS, KRX, KSD) pairs won internationalisation with a legal basis for won stablecoins [70]
LAW	FSC preparing one government Digital Asset Basic Act consolidating 10 bills (29 Jul); debated: banks ≥51% of issuing consortia, 15–20% caps for exchanges [70]
CBDC	Project Hangang Phase 2 in live-transaction testing; won stablecoin still lacks a legislative basis [70]

China (mainland)

#12

MARKET	Chainalysis #12; #2 in domestic P2P despite the trading ban [65]
PAYMENTS	Corridor activity via Hong Kong and Singapore
RAILS	CIPS, UnionPay, Alipay/WeChat Pay; e-CNY
RULES	No private stablecoin pathway; state focus on e-CNY (background)

Australia

#15

MARKET	Chainalysis #15; APAC corridors with low delivery cost [65,7]
PAYMENTS	Treasury and cross-border B2B
RAILS	NPP, PayTo, BPAY
RULES	Digital Assets Framework Act 2026; ASIC “exempt foreign issuer” relief; payment-stablecoin regime via SVF reform pending [7]

Sources: Chainalysis; CoinGecko; CryptoNexa; Coinpedia; Seoul Economic Daily; CoinDesk Research [65,70,7].

REGION · CHAPTER 08

Southeast Asia: a corridor market between strong QR rails

Inbound remittances (Philippines, Vietnam), outbound worker and trade flows (Indonesia, Thailand, Malaysia), and Singapore as the regulated hub.

MARKET	CHAINALYSIS 2026	DOMESTIC RAIL	STABLECOIN POSTURE	DOCUMENTED ACTIVITY
Singapore	—	PayNow / FAST	Regulated issuance hub (SCS)	XSGD/XUSD; Nium, dtcpay, TripleA [7]
Thailand	#8 (P2P #5)	PromptPay	Selected stablecoins for regulated activities	Strong remittance usage [7]
Indonesia	#14	BI-FAST / QRIS	OJK supervises; rupiah legal-tender limits	Taiwan→Indonesia top corridor [7]
Vietnam	#18 (flows #7)	NAPAS 247	Pilot crypto-asset framework (2025)	High retail adoption
Philippines	#19	InstaPay / QR Ph	BSP VASP regime	Remittance-led usage [7]
Malaysia	—	DuitNow	Ringgit stablecoin RMJDT (Dec 2025)	Local-currency experiment

Chainalysis overall rank, SE Asia

lower is stronger

Bar length = 21 minus rank, for visual ordering only.

LAST-MILE INFRASTRUCTURE

Nium's Circle partnership connects USDC settlement through CPN to local-currency payouts across 190+ countries, directly relevant to SE Asian last-mile delivery [1].

CARD PROGRAMS

Rain expanded its Visa principal membership into APAC, with card launches expected from Q2 2026 [34].

Sources: Chainalysis 2026; CoinDesk Research APAC [65,7].

REGION · CHAPTER 09

Africa: dollar substitution at grassroots scale

Sub-Saharan Africa led global crypto-economy growth in Chainalysis' 2026 period on exceptionally strong peer-to-peer activity. Nigeria ranks #1 worldwide for both P2P and cross-border flows.

Nigeria #3

INDEX	#1 P2P, #1 cross-border [65]
SCALE	$92.1B value received (Jul 2024–Jun 2025), nearly 3x South Africa [37]
USE	Dollar substitute amid FX shortages; USDT-led
RAILS	NIBSS Instant Payment
RULES	SEC oversight under ISA 2025

South Africa #9

INDEX	#3 cross-border, #4 P2P [65]
SCALE	Second in SSA by value received [37]
USE	Cross-border trade and treasury; more institutional
RAILS	RTC, PayShap
RULES	FSCA CASP licensing; cross-border framework pending

Kenya

INDEX	Top-5 SSA market by volume [37]
SCALE	n/d for 2026
USE	Remittances, freelancer income
RAILS	M-Pesa, PesaLink
RULES	VASP legislation enacted 2025

Value received, Jul 2024–Jun 2025 USD billions

STABLECOIN VS USDC DEMAND

Stablecoin demand is structural: savings, imports, remittances, mostly USDT on Tron. USDC demand concentrates in fintech treasury and B2B settlement where regulated counterparties need attested reserves. No Africa-specific USDC share is published.

MEASUREMENT GAP

Earlier Chainalysis regional data captured centralized-exchange activity only; P2P and OTC, likely large, were excluded. The 2026 methodology adds domestic P2P, which is why Nigeria now ranks #3 overall. Yellow Card reports >$6B cumulative stablecoin volume across 35+ countries (secondary).

Sources: Chainalysis 2026 and 2025 via Mariblock [65,37].

CHAPTERS 10–11

Middle East and Europe: licence-first markets

United Arab Emirates

MARKET	Regional hub; Circle holds an ADGM FSRA permission (Dec 2025) [38]
PAYMENTS	Digital-asset settlement must use fiat or a registered foreign payment token; USDU first registered (Jan 2026), reserves at Emirates NBD and Mashreq [38]
RAILS	UAEFTS, Aani; Jaywan domestic cards
RULES	CBUAE Payment Token Services Regulation; VARA, FSRA, DFSA

Saudi Arabia

MARKET	No public stablecoin payment data located
PAYMENTS	Large outbound remittance market (background)
RAILS	SARIE instant payments, mada
RULES	No dedicated stablecoin regime identified

European Union

RULES	MiCA titles since Jun 2024; CASP transition ended Jul 2026
DATA	EURe fell from ~88% of crypto-card spend (early 2024) to ~2% (Jul 2026) [32]
RAILS	SEPA Instant mandated; TARGET2

United Kingdom #17

RULES	FCA PS26/10; gateway 30 Sep 2026–28 Feb 2027; regime live 25 Oct 2027; BoE £40bn guardrail [21,22]
DATA	#6 in service flows [65]
RAILS	Faster Payments, CHAPS

Switzerland

RULES	FINMA Guidance 06/2024 (background)
DATA	No 2026 USDC payment data located
RAILS	SIC, SIC5

EUROPE'S CURRENCY REALITY

Germany ranks #13 (#5 in balances) in Chainalysis 2026. TRM finds EUR stablecoins under 0.3% of VASP volume but accelerating. Mastercard brought USDC/EURC settlement to EEMEA acquirers [65,75,42].

DOMESTIC CASE IS NARROW

SEPA Instant narrows the domestic stablecoin case; Europe's opportunity is cross-border and 24/7 treasury. Lloyds and Visa announced stablecoin settlement to speed cross-border payments [64].

SCORECARD

23 markets at a glance

Chainalysis = 2026 overall rank (— = outside top 20). USDC access = FurlPay Research qualitative judgement of regulated USDC usability for payments; not a forecast.

MARKET	CHAINALYSIS	FRAMEWORK	USDC ACCESS	DOCUMENTED USDC ROUTE
United States	2	GENIUS (law)	High	Settlement, distribution
Brazil	1	Res. 519–521, 561	Medium	Licensed VASPs only
India	6	None; prohibition-leaning	Low	Offshore-leg only
Nigeria	3	ISA 2025	Low–Med	USDT-led retail
Japan	4	PSA, bank-anchored	Medium	SBI, JCB
South Korea	5	DABA pending	Low	Kakao exploratory
Singapore	—	SCS framework	High	Hub; Nium/CPN

NEW ENTRANT

Open USD: the payment incumbents now co-own an issuer

On 30 September 2026, Open Standard launched OUSD with Coinbase, Mastercard, Shopify, Stripe and Visa as founding partners, each holding an equal initial equity stake.

SEED LIQUIDITY
$1B+
Committed by founding five [63]

CONSORTIUM MEMBERS
100+
Incl. Google, BlackRock (Bloomberg) [63]

LAUNCH CHAINS
4
Base, Ethereum, Solana, Tempo [63]

MINT / REDEEM
1:1
No cost via BVNK, Stripe, Visa [63]

How OUSD reaches businesses

PARTNER	ROLE AT LAUNCH
Stripe	Default stablecoin for businesses; Stripe Treasury balances; Stripe Issuing cards; sends to wallets in 100+ countries
Visa	Mint/redeem via Visa Stablecoin Platform
BVNK (Mastercard)	Mint/redeem at par
Coinbase	Trading at launch; mint access from October
Kraken, Uniswap	Trading venues

THE ECONOMIC SHIFT

OUSD shares reserve earnings with participating businesses, giving banks, platforms and merchants a reason to distribute it. That challenges the issuer-keeps-the-float model used by USDT and, largely, USDC [64].

THE PRECEDENT

Paxos' USDG launched in late 2024 on the same pass-through promise and sits near $3.2B, so distribution economics alone do not guarantee scale [63].

Implications

- **For USDC:** its two largest card-network partners now also own a competing coin; USDC remains the established settlement asset with 38 native chains and Arc.
- **For merchants and fintechs:** more competition for distribution means better economics for whoever controls end users.
- **For FurlPay:** multi-stablecoin support (USDC, OUSD, EURC) at the orchestration layer avoids betting on one issuer.

Coinbase

DEVELOPMENT	DETAIL
USDC distribution	~$19B average USDC on platform, Q1 2026; ~56% of USDC reserve income shared [35,71]
Base	x402 agent payments; 19% of crypto-card spend [32]
x402	160M+ agentic payments in trailing year; donated to x402 Foundation (Linux Foundation) [35,36]
Citi partnership	Fiat-to-stablecoin business payments; CFTC clearinghouse approval (29 Sep 2026) [73]
OUSD	Founding partner; trading at launch [63]

WHAT PROCESSORS MEAN FOR ADOPTION

Stablecoins become a payment method and treasury balance inside existing processor APIs rather than a separate crypto product. Merchants get stablecoin acceptance and payouts with no new integration [16].

Sources: Stripe letter via CoinDesk; Everstake; Spark; Blockhead; KuCoin/The Defiant [16,17,48,73,35].

BANKS · CHAPTER 16

Banks become stablecoin rails

BANK	INITIATIVE	TYPE
BNY	Primary USDC reserve custodian; USDC mint/redeem in Digital Asset Custody	Stablecoin access
Standard Chartered	Bank-led USDC mint/redeem; Arc validator	Stablecoin access
Citi	Coinbase partnership for fiat-to-stablecoin business payments (Sep 2026); Citi Token Services	On-ramp / deposits
Lloyds	Stablecoin settlement with Visa for cross-border payments	Network settlement
Cross River, Lead Bank	USDC settlement with Visa; early Mastercard participants	Network settlement
SoFi	SoFiUSD settles Mastercard card transactions, >$25B/yr expected	Bank-issued stablecoin
HSBC	Among first HKMA stablecoin licensees (Apr 2026)	Bank-issued stablecoin
Hana, Woori (Korea)	Dunamu stake; KRW stablecoin consortium preparation	Issuance prep
Emirates NBD, Mashreq	Reserve banks for USDU (UAE)	Reserve custody
JPMorgan, Société Générale	Kinexys deposit tokens; EURCV/USDCV	Tokenized deposits

Settlement assets compared

	STABLECOINS	TOKENIZED DEPOSITS	WHOLESALE CBDC	CORRESPONDENT
Issuer	Licensed non-bank or bank sub	Commercial bank	Central bank	Commercial banks
Ledger	Public chains	Mostly permissioned	Permissioned pilots	Bank ledgers + SWIFT
Hours	24/7/365	24/7 in network	Pilot-dependent	Banking hours, cut-offs
Reach	Global, open	Bank's clients	Participating CBs	Global via correspondents
2026 maturity	Production: cards, B2B	Production at select banks	Experiments (Hangang, Ensemble)	Incumbent

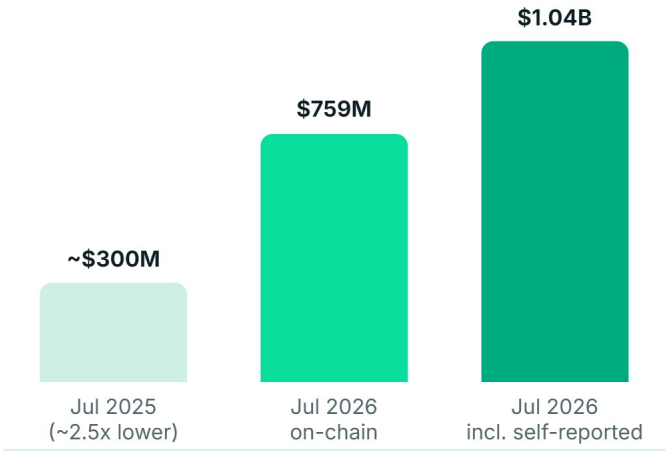
Sources: Circle; HKMA via CoinDesk Research; PYMNTS; Blockhead; CoinGecko [1,7,64,73,70].

CARDS · CHAPTER 17

Stablecoin cards: the fastest consumer channel

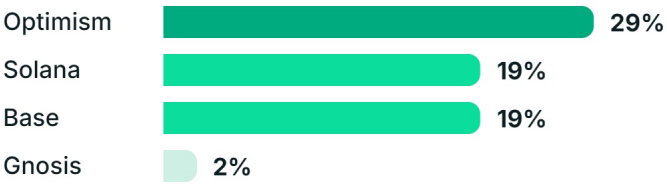
Monthly crypto-card spend

USD millions



Spend by stablecoin

Spend by chain



Jul 2025 bar derived from the reported ~2.5x YoY growth.

Card lifecycle

01 User USDC
Self-custody or issuer balance

02 Authorization
Issuer checks balance, ~2s

03 Conversion
Issuer liquidity to fiat obligation

04 Network
Visa / Mastercard clearing

05 Acquirer
Merchant bank

06 Merchant
Receives fiat as normal

MODEL	FUNDS HELD	EXAMPLES
Custodial issuer balance	Issuer holds user stablecoins	RedotPay ($395M/month self-reported), KAST
Self-custody debit	Smart-contract pull at authorization	Ether.fi, Gnosis-origin programs
Card-as-a-service	Partner wallets; issuer is principal member	Rain, Bridge–Visa, Stripe Issuing (OUSD)
Exchange cards	Exchange balance	Coinbase: ~16% of card volume involved USDC

ECONOMICS

Consumers pay standard interchange-bearing card transactions; the stablecoin benefit accrues to the program operator through 7-day settlement and less prefunding. Rain reports trapped capital reduced by >40% in some cases. Average tracked ticket rose from $59 to $86, everyday spend rather than off-ramping [34,33].

Sources: a16z crypto (Paymentscan); CoinDesk; Rain [32,33,34].

ECONOMICS · CHAPTER 18

Cross-border: the stablecoin sandwich vs correspondent banking

Correspondent banking

Sender · initiates wire

Originating bank · compliance, FX quote

Correspondents · nostro/vostro prefunding

FX conversion · spread + fees

Beneficiary bank · cut-off dependent

Recipient · T+1 to T+3

Stablecoin sandwich

Sender · fiat in

On-ramp · licensed provider → USDC

Blockchain · seconds–minutes, 24/7

Liquidity / FX · local-currency conversion

Off-ramp · Pix, UPI, SEPA, PayNow

Recipient · same day if rails open

DIMENSION	CORRESPONDENT	STABLECOIN	CAVEAT
Settlement time	1–3 business days	Seconds to minutes	Limited by on/off-ramp hours
Operating hours	Banking hours	24/7/365	Fiat legs bound by domestic rails
FX	Bank spread	Still needed at off-ramp	APAC median 6.1 bps [7]
Liquidity	Prefunded nostros	Just-in-time possible	Needs deep local liquidity
Cost savings	—	41% of users ≥10% [53]	Survey-based
Compliance	Mature KYC/AML	Travel Rule, analytics	Rules diverge (Brazil 561) [62]
Finality	Recalls possible	Final; issuer can freeze	Disputes off-chain
Capital	Trapped in prefunding	Lower prefunding	Rain: >40% reduction [34]

REAL DEPLOYMENTS

Nium USDC settlement via CPN into 190+ countries; Corpay using RLUSD for APAC funding; Polygon app payments >$2B in Jan 2026 (Revolut, Tazapay, Avenia); Lloyds–Visa cross-border settlement; Chainalysis' average cross-border stablecoin transfer is ~$3,000 [1,7,41,64,65].

Sources: As cited.

USE CASES · CHAPTERS 19–21

Merchant payments, treasury and remittances

B2B, 2025
$226B
Largest segment [8]

C2C, 2025
$77B
Remittance proxy; 0.37% penetration [8]

C2B, 2025
$76B
Mostly platform collections [8]

Merchant payments: the least mature use case

MODEL	MERCHANT RECEIVES	SCALE EVIDENCE
Stablecoin-linked card	Fiat	$759M/month [32]
Processor checkout (Stripe ~1.5% flat, PayPal)	USD or stablecoin	Not disclosed
Merchant opt-in USDC settlement (Mastercard/Nuvei)	USDC	Not disclosed [42]
Shopify via OUSD consortium	TBD	Founding partner, Sep 2026 [63]
In-store visitor payments (JCB–Circle, Japan)	TBD	Announced [1]

Treasury & B2B

24/7 intercompany transfers and just-in-time funding; Marex accepts USDC initial margin; tokenized RWAs reached $27.9B at end-Q2 2026; BlackRock BUIDL and USYC serve as collateral on Arc [1,7,67].

Payroll & payouts

Deel and Flywire among BVNK clients; Nium connects USDC settlement to 190+ payout countries; Stripe sends OUSD to wallets in 100+ countries [15,1,63].

Remittances

Overwhelmingly USDT-denominated in emerging markets. USDC participates through licensed payout networks (Nium via CPN; MoneyGram, an Arc validator with its own MGUSD) [1,47].

The last-mile constraint

Where cash-out, liquidity and licensing are missing or restricted (India; Brazil eFX from 1 Oct), stablecoins shift rather than eliminate cost [23,62].

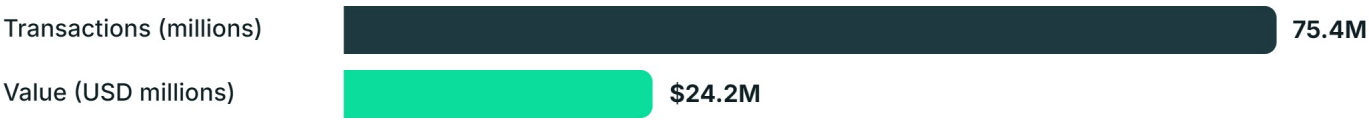
Sources: McKinsey & Artemis; a16z; Circle; Mastercard; Open Standard coverage [8,32,1,42,63].

EMERGING · CHAPTER 22

AI-agent payments: most announced, least monetised

X402 VOLUME IN USDC	X402 TXNS, 30 DAYS	VALUE, SAME WINDOW	AVERAGE PAYMENT
99.3%	75.4M	$24.2M	~$0.32
Circle claim [1]	Mid-2026 [36]	[36]	Derived [36]

Value vs transactions, one 30-day window



PROTOCOL / PRODUCT	OWNER	STATUS
x402 (HTTP 402 payments)	Coinbase → x402 Foundation (Linux Foundation, 14 Jul 2026; Visa, Mastercard, Stripe premier members)	LIVE
Machine Payments Protocol	Stripe / Tempo	LIVE
Agentic Commerce Protocol	Stripe & OpenAI	LIVE
Agent Stack (900+ paid services)	Circle	LIVE
Arc "agentic economic activity"	Circle, mainnet Sep 2026	LIVE
Agentic Ready / Agent Pay	Visa / Mastercard (card-based)	PROPOSED

Commercially deployed

API and data micropayments; programmable wallets with spending limits; pay-per-call content and compute.

Still experimental

Agents earning revenue; autonomous procurement; agent identity standards; dispute handling for machine payments.

READ THE 99.3% CAREFULLY

Accurate but small in absolute terms. Early x402 volume was inflated by a memecoin mint; by early 2026, transfers above $1 were 95% of value. Coinbase reports 160M+ agentic payments in a trailing year [36,35]. Treat as developer-platform optionality.

Sources: Circle; Forkast; Coinbase via The Defiant [1,36,35].

REGULATION · CHAPTER 23

Regulation: convergence in the core, divergence at the edges

JURISDICTION	FRAMEWORK	LICENSING	KEY IMPLICATION
US	GENIUS Act (2025); Treasury IFR 30 Sep 2026	Federal/state PPSI; $10B line	Effective by 18 Jan 2027
EU	MiCA	EMI / CASP	Non-compliant coins restricted
UK	FSMA; FCA PS26/10	Gateway Sep 2026–Feb 2027	Live 25 Oct 2027
Singapore	SCS framework + PSA	MPI licence	Foreign recognition consulted
Hong Kong	Stablecoins Ordinance	HKMA issuer licence	No equivalence path
Japan	Payment Services Act	Bank / trust / EPI	Foreign trust-type pathway
South Korea	DABA (pending)	FSC licence; bank-led	Phase-2 law in H2 2026 plan
India	None	PA-CB for fiat legs	Prohibition-leaning
UAE	CBUAE PTSR	Payment token licence	Registered-token rule
Brazil	Res. 519–521, 561	VASP by 30 Oct 2026	eFX stablecoin ban 1 Oct
Australia	DAF Act 2026	AFSL extension	Exempt foreign issuer relief
Nigeria / S. Africa	ISA 2025 / FSCA CASP	SEC / CASP licence	Cross-border rules pending

Timeline

2025
GENIUS Act signed (Jul); HK Ordinance (Aug); Brazil Res. 519–521 (Nov)

H1 2026
OCC NPRM; Tempo mainnet; HKMA licences; BoE/FCA final rules; Mastercard settlement

Q3 2026
CLARITY fails (15 Sep); Arc mainnet; Fed proposals; Treasury IFR (30 Sep)

Q4 2026
Brazil Res. 561 (1 Oct); SEC comment close 20 Oct; OCC final rule (Nov target)

2027
GENIUS effective 18 Jan; UK regime 25 Oct; Arc PoS target

THE RECOGNITION QUESTION

Cross-border usability of USD stablecoins increasingly depends on equivalence: GENIUS comparable-regime determinations, Australia's exempt-foreign-issuer relief, Japan's trust-type pathway and Singapore's consultation, versus Hong Kong's licensing without equivalence and Brazil's rail-level restrictions.

Sources: OCC, Treasury, Fed, BoE, FCA, CoinDesk Research, Reuters via Payment Expert, BCB, The Block, CNBC [18–23,28,38,59,60,68]. Summaries only; not legal advice.

POSITIONING

Where FurlPay fits in the stablecoin stack

FurlPay's product capabilities were not provided with this brief and no public documentation was located, so this page maps market requirements only. Each module is marked To be confirmed until checked against the product.

MODULE	MARKET REQUIREMENT	RELEVANT INFRASTRUCTURE	DEPENDENCY	STATUS
Payments	Stablecoin acceptance & payouts	Circle APIs/CPN, Bridge, BVNK	Licensed off-ramps per market	TBC
Banking	Fiat accounts, virtual IBANs	Partner bank / EMI	Banking licence or BaaS	TBC
Cards	Stablecoin-linked card program	Rain, Bridge (principal members)	Program manager approval	TBC
Travel	Cross-border spend, FX	Card networks, FX partners	Consumer & card rules	TBC
Investments	Tokenized MMF / RWA access	USYC, BUIDL, custodians	Securities regulation	TBC
Developer SDK	Wallet and payment APIs	Circle Wallets, CCTP	Developer KYB, AML	TBC
x402 / MCP	Agent payments & tool access	x402 Foundation, Agent Stack, MPP	Spend limits, agent identity	TBC
Settlement	Treasury in USDC / OUSD	Circle Mint, bank mint/redeem, Arc	Counterparty diligence	TBC
Cross-border	Corridor payouts	Nium, Thunes, local PSPs	India PA-CB; Brazil VASP/eFX	TBC
Self-custody	User-controlled wallets	MPC / smart accounts	Travel Rule, unhosted wallets	TBC

FurlPay · experience + orchestration layer
Move money globally with digital dollars

Stablecoins
USDC · EURC · OUSD · CCTP · Arc

Cards
Visa / Mastercard via program manager

Banking
Partner banks · fiat rails

Chains
Base, Solana, Ethereum, Arc, Tempo

Processor / issuer
Rain, Bridge, BVNK

Local rails
UPI, Pix, SEPA, FPS, PayNow

Where market evidence is strongest for an infrastructure company

01 **Card programs with stablecoin settlement:** $759M/month observed spend, 160+ Visa programs, white-label principal issuers [32,12].

02 **B2B cross-border payouts:** the largest real use case ($226B), with CPN/Nium and BVNK as licensed rails [8,1,15].

03 **Multi-stablecoin orchestration:** OUSD and bank coins fragment issuance; routing across USDC, OUSD and EURC is a defensible layer [63].

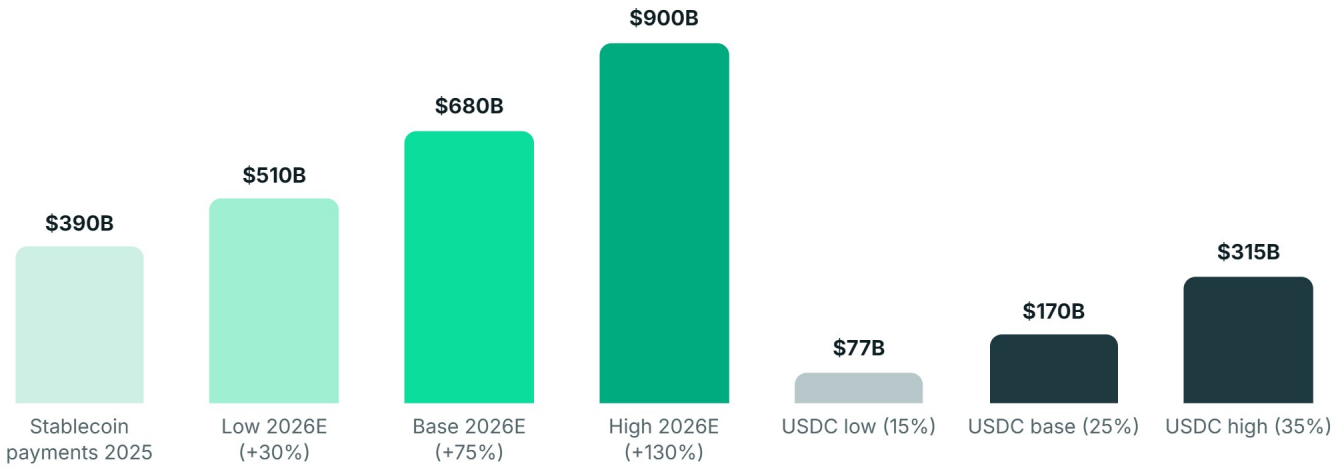
04 **India corridor:** real demand; only offshore-leg, PA-CB-partnered models are viable today [24,69].

OUTLOOK · CHAPTER 24

Outlook 2026–2030 and the 2026E scenario model

2026E USDC payment volume scenarios

USD billions · MODEL



LAYER	VALUE	BASIS	LABEL
Total stablecoin supply	$300.9B	RWA Foundation, 1 Oct 2026 [56]	INDEPENDENT
Raw transfer volume	$33T (2025)	Artemis [41]	INDEPENDENT
Adjusted transfer volume	$10.8T (2025)	Visa/Allium [9]	SECONDARY
Cross-border stablecoin flows	$220.3B (Jul 25–Jun 26)	Chainalysis, lower bound [65]	INDEPENDENT
Stablecoin payment volume	$390B (2025)	McKinsey/Artemis [8]	ESTIMATE
USDC payment volume, 2026E	$77B / $170B / $315B	USDC share 15 / 25 / 35%	MODEL

SHARE RATIONALE

USDC is ≤9% of APAC payments and 7.1% of Brazil's declared volume, but 58% of card spend and ~67–70% of filtered volume. A 15–35% blended payment share reflects that range. The unverified $6.5T draft figure is excluded (~40x our base case).

2027–2030: WHAT TO WATCH

GENIUS effective 18 Jan 2027 and OCC licensing; equivalence between US, EU, UK and APAC regimes; OUSD and bank coins vs USDC for distribution; Arc and Tempo at production volume; Korea's won stablecoin law; any Indian policy decision; spread of Brazil-style rail restrictions.

2030 values are not projected numerically: no primary source publishes a payment-volume forecast, and compounding a one-year estimate four more years adds false precision.
